Section 1. INTRODUCTION

The Code will be used in the assessment of allegations of misconduct made against individual veterinarians. It provides a framework of principles and professional and ethical standards. **Non-compliance with any aspect of the Code will be considered unprofessional conduct.**

Persons registered with the Veterinary Surgeons Board of South Australia are expected to abide by the following basic principles when carrying out their professional duties:

- The primary concern of the profession is for the welfare of the animals.
- All work performed by veterinarians is to a standard of competence acceptable to their peers.
- Veterinarians, individually, act to promote cohesion within the profession and the trust of the profession by the general public.
- No personal advantage is sought to the detriment of a professional colleague.

Section 2. GUIDELINES FOR PROFESSIONAL CONDUCT

- Veterinarians have a special duty towards animal welfare and to alleviate animal suffering. They must be conversant with the provisions of the *Prevention of Cruelty to Animals Act 1985* and its Regulations and any codes of animal welfare relevant to their fields of endeavour.
- Veterinarians must communicate effectively and treat all with whom they come into contact with respect, consideration, courtesy and openness.
- Veterinarians must conduct themselves in a manner that will maintain or enhance the reputation of the profession. (Veterninarians are reminded that registration can be suspended if their performance is affected because of any mental or physical disability or condition).
- Veterinarians should not show disrespect for colleagues. They should uphold a working environment in which colleagues can freely exchange information to the benefit of patients, and society in general.
- Veterinarians must be conversant with and abide by all statutory requirements affecting them individually in their various professional roles and take every reasonable step to ensure their observance by others.
- Veterinarians must keep abreast of knowledge and skills in their field of endeavour, and accept the obligation to continue their education and so further their professional knowledge and competence.
- Except in an emergency where immediate relief of suffering is paramount, veterinarians have a duty to operate only in fields in which they are competent to do so unless supervised by a colleague with competence in the field.
Section 3. GENERAL GUIDELINES

1. General Practice

   a. A registered person must not practise veterinary surgery in a manner that would be likely to bring the practice of veterinary surgery into disrepute.

   b. A registered person must not assume a name or description that would be taken by a reasonable person as meaning that the registered person holds a qualification, or has experience in, veterinary science, surgery or medicine unless the registered person actually holds that qualification or has that experience.

   c. Sub rule (b) does not prevent a registered person who is not the holder of a doctorate from assuming the title "Doctor".

   d. A registered person who gives a public speech relating to the practice of veterinary surgery or publishes, by newspaper, radio or television, a report or notice relating to the practice of veterinary surgery must ensure that the speech, report or notice—
      i. is not false or misleading;
      ii. does not compare the competence of any registered person with that of any other;
      iii. is not vulgar or sensational;
      iv. would not tend to bring the practice of veterinary surgery into disrepute.

      In this rule— "newspaper" includes magazine, journal or any other written publication.

   e. A veterinary surgeon who operates or participates in a veterinary science practice must not enter into a contract or arrangement under which a publisher or distributor of a directory or other publication includes, or agrees to include, in the directory or publication an entry that advertises or promotes that practice to the exclusion of any other veterinary science practice.

   f. A registered person must ensure that, at all times during which premises from which the person provides veterinary treatment are unattended—
      i. telephone enquiries directed to the premises are redirected in such a manner that they may be taken by a registered person or answered by recorded message specifying a telephone number by which a registered person may be contacted; and
      ii. there is displayed at or near the entrance to the premises a sign, illuminated during hours of darkness, specifying the name of a registered person and the telephone number at which that person may be contacted.

   g. A registered person must not practise veterinary surgery in a name other than the person's own name or a name approved by the Board.

   h. Despite rule (g), if a registered person was a practising veterinary surgeon at the time of his or her death, the practice may be carried on in the name of the deceased person by another registered person for a period not exceeding 12 months from the date of death.

2. Animal welfare

   a. A veterinary surgeon must at all times consider the welfare of animals when practising veterinary science.

   b. A veterinary surgeon who has accepted responsibility for the care of an animal should ensure that the animal is not abandoned unless there is good reason to do so and unless the welfare of the animal is safeguarded.
c. A veterinary surgeon who provides veterinary services directly to the public should not, without good reason, refuse to provide relief of pain or suffering of an animal. Relief may be confined to emergency treatment only or immediate referral to another veterinary surgeon.

d. Any animal having an invasive procedure performed should be administered an appropriate level of pain relief, that is effective for a reasonable length of time, as part of routine practice.

3. Correction of genetic defects

a. It is unethical for a veterinary surgeon to perform a surgical operation on, or to provide medical treatment for, an animal if the primary purpose of the operation or treatment is to conceal the animal’s true genetic status so as to enhance its value for sale, breeding or showing in competition.

b. A veterinary surgeon who becomes aware that an animal belonging to a client is suffering from a defect or disease that is known to be inheritable must inform the client of the defect or disease and its implications for breeding programs.

c. It is not unethical for a veterinary surgeon to perform a surgical operation for the correction of an inheritable defect or to provide medical treatment for an inheritable disease, but only if the primary purpose of the operation or treatment is to relieve or prevent pain or discomfort to the animal.

4. Proscribed procedures

a. The following procedures may only be carried out by registered persons for genuine therapeutic purposes and records must substantiate this:
   i. declawing of cats,
   ii. tail docking of dogs, horses or cattle,
   iii. ear cropping of dogs.

b. Bark reduction must only be carried out for therapeutic or prophylactic reasons, or as an alternative to euthanasia for a dog that barks persistently. It should not be carried out as a substitute for the proper management and training of a dog. Veterinarians requested to perform bark reduction must be convinced that all reasonable attempts have been made by the owner to modify the dogs behaviour by alternative and humane means.
   (See Appendix I of the Handbook for the Code of Practice for Debarking and a sample statutory declaration that could be used to assist the veterinarian in ensuring that the owners fully understand the legal ramifications of the procedure.)

5. Professional practice

a. A veterinary surgeon should, at all times, diligently maintain knowledge of current standards of veterinary science.

b. Professional procedures should always be carried out in accordance with current standards of veterinary science.

c. Informed decisions
   Except in the case of an emergency, a veterinary surgeon should not undertake any veterinary procedure on an animal without ensuring that the owner or person in charge of the animal is made aware of the likely extent and outcome of the procedure and of its probable cost and any ongoing costs. An example of an emergency is a circumstance in which there is an immediate threat to the life of the animal concerned.
d. **Referrals**
   A veterinary surgeon should refer a client to an appropriately qualified veterinary surgeon whenever a second opinion or a referral is desirable.

e. A veterinary surgeon should not refuse a request by a client for a referral or second opinion.

f. A veterinary surgeon to whom a client of another veterinary surgeon is referred or who is asked to provide a second opinion for such a client should act in the best interests of that client and the animal concerned.

g. A veterinary surgeon who has previously treated an animal must, when asked by another veterinary surgeon who has taken over treatment of the animal, provide all relevant details of clinical history directly to the other veterinary surgeon.

h. A veterinary surgeon to whom another veterinary surgeon has referred an animal for treatment or a second opinion should return all documents and other articles provided by the other veterinary surgeon when the animal is finally discharged or is referred back to the other veterinary surgeon.

i. **Vicarious liability**
   A veterinary surgeon responsible for the professional supervision of lay staff must ensure that the staff carry out their duties effectively and in compliance with relevant legislation.

j. A veterinary surgeon should ensure that:
   i. support staff treat as confidential and refrain from divulging any information relating to clients or their animals acquired during the course of their employment, and
   ii. support staff, having in an emergency given first aid to an animal for the purpose of saving life or relieving pain, report and hand over the case to the veterinary surgeon or another veterinary surgeon at the earliest opportunity, and
   iii. information relating to a client or a client’s animal obtained in the course of examining or treating the animal is not divulged, except when referring the animal to another veterinary surgeon for treatment or a second opinion or with the consent of the client.

k. **Certification**
   When a veterinarian provides a certificate, it must be prepared with care and accuracy: be legible, bear the date of examination or procedure carried out, what the certificate actually attests to, the date of issue of the certificate, and the name, address and signature of the issuing veterinarian.

A veterinary surgeon should not sign a certificate relating to the performance of a veterinary service unless:
   i. the certificate is accurately completed to the best of the veterinary surgeon’s knowledge, and
   ii. the surgeon has personally performed or supervised the performance of the service.

l. **Record Keeping**
   Veterinarians must maintain adequate records of treatment carried out. As soon as practicable after treating an animal or consulting with a client, a veterinary surgeon should ensure that a detailed record of the treatment or consultation is made. This record should include: description of the problem, differential diagnoses, treatment carried out, any x-ray film, radiograph or ultrasound image relating to the treatment of an animal. The veterinary surgeon should ensure that the record is kept in safe custody for at least 2 years after the relevant treatment or consultation.
Records of any case should be of such detail that any veterinary surgeon could take over management of the case at any time. Records should be sufficient to stand alone to justify treatment and procedure.

m. Consent Forms
   The use of consent forms is strongly recommended.

6. Drugs, antibiotics and other chemical or biological substances
   a. A veterinary surgeon must ensure that conditions imposed by other legislation (such as the Controlled Substances Act 1984) relating to dispensing, handling or storing restricted or dangerous drugs are strictly complied with.
   b. A veterinary surgeon is responsible for ensuring that clients are aware of the need to comply with the withholding periods recommended for the administration of antibiotic and other drugs to food producing animals or to animals used in a sport that has rules about the use of chemical substances.
   c. A veterinary surgeon may only dispense controlled substances to a bona fide client, that is, the animal/herd owned by the client must be under their care; the animal/herd must have been seen for the purposes of diagnosis, or the premises on which the animal/herd is kept visited recently enough to have an accurate picture sufficient to enable accurate diagnosis, and the treatment must be recorded.
   d. It is recommended that if a drug is supplied to the client for use when a veterinarian is not present an ‘Acknowledgement of Risk & Responsibility’ form is signed by the client to bring to their attention the potential for adverse reaction. (Refer to the Handbook for sample copy).

7. Legislative responsibilities
   To ensure that a veterinary surgeon is able to practise veterinary science in a safe and competent manner, the surgeon must acquire and maintain a sufficient knowledge of all laws that affect the practice of veterinary science, including:
   I. laws regulating the supply, dispensing and storage of poisons and therapeutic substances,
   II. laws regulating and controlling the use, keeping and disposal of radioactive substances and radioactive apparatus for therapeutic purposes; and
   III. laws relating to continuing professional development and recency of practice.

8. Special interest areas
   Before undertaking practice in a special interest area of veterinary science with which the veterinary surgeon is not familiar, a veterinary surgeon should ensure that he or she has the knowledge and competence necessary to practise in that area.
